 Production

 Damage

 Biodiversity

 Reservoir for crop auxiliaries

**Replace 1 simple & efficient technique by combinations of partially efficient & interacting techniques**

Production

Damage

Biodiversity

Reservoir for crop auxiliaries

Replace 1 simple & efficient technique by combinations of partially efficient & interacting techniques

Innovations identified by research are rarely adopted by farmers

Synthesise knowledge

Organise decision rules

What is missing?

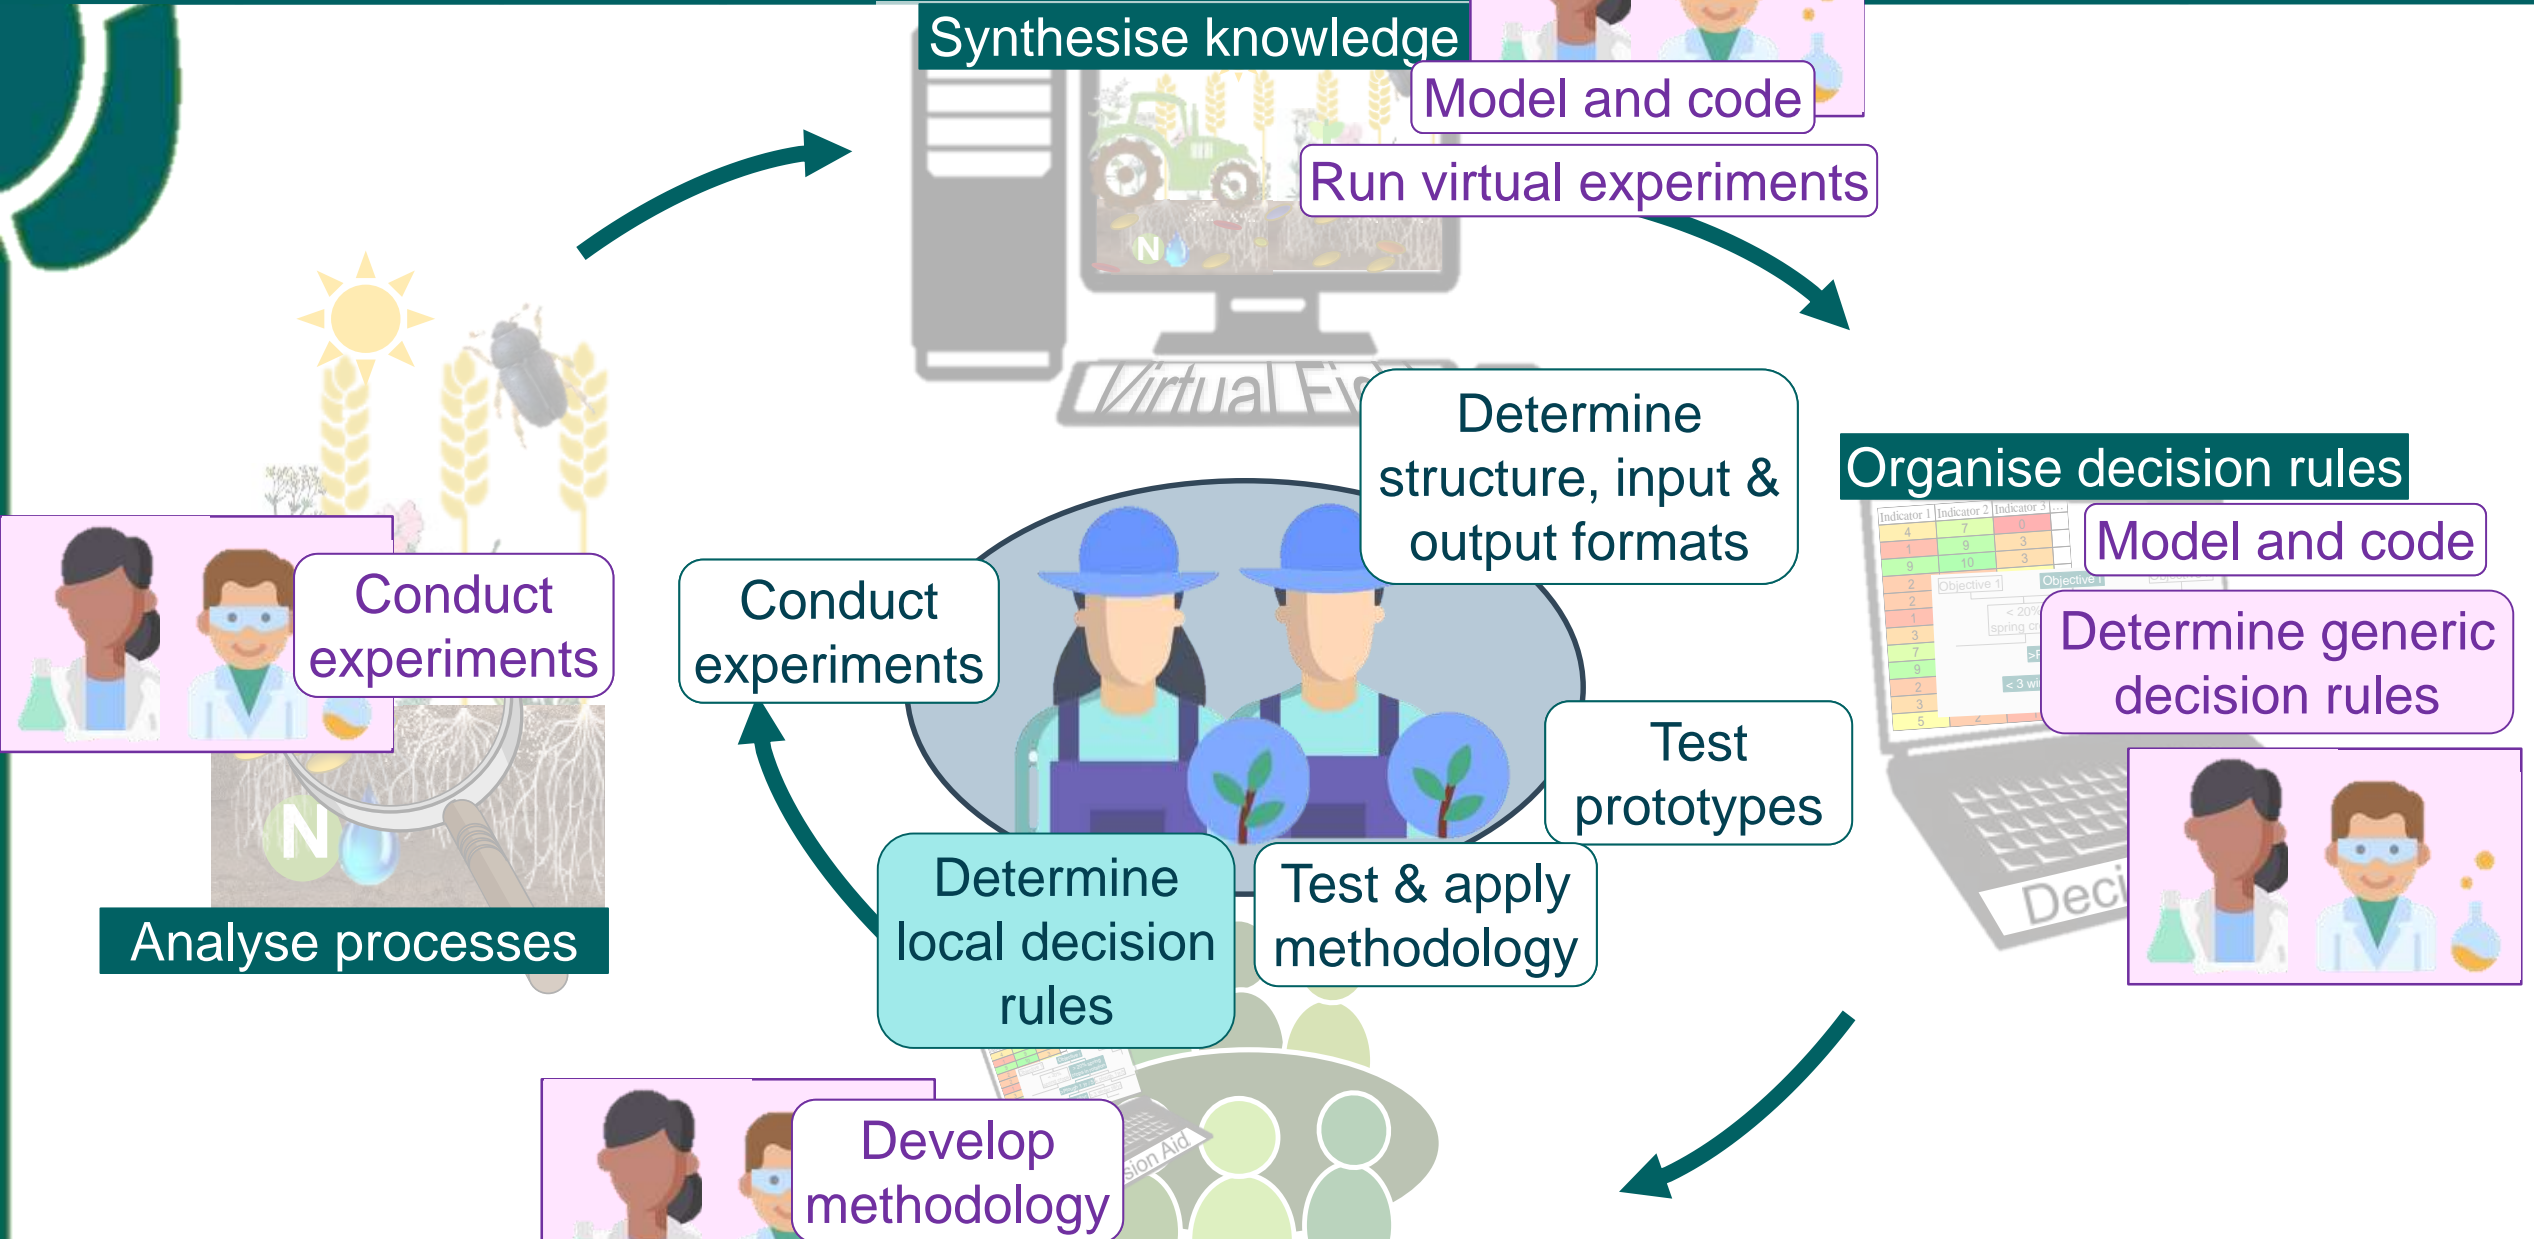

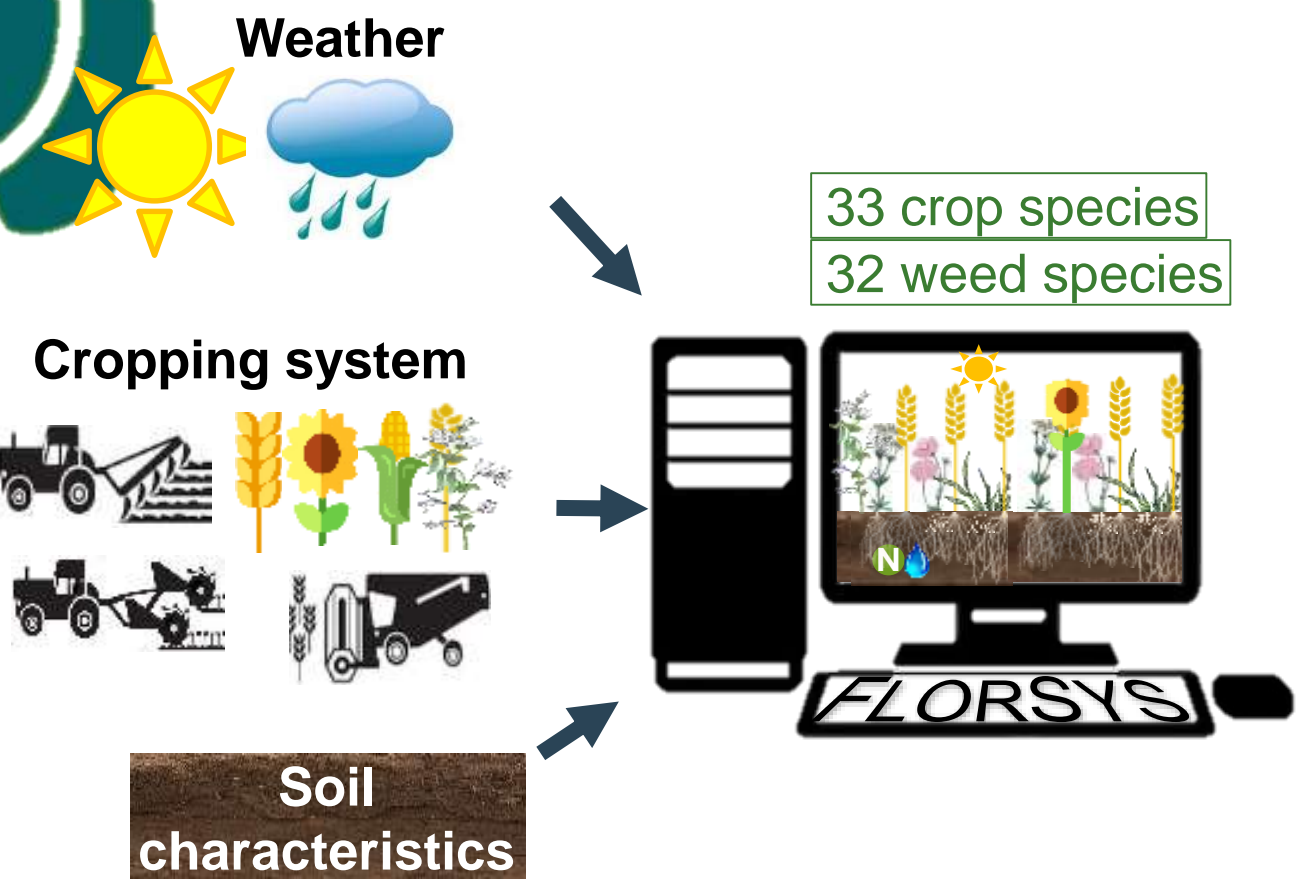

How to take decisions?

Analyse processes

33 crop species  
32 weed species

**Detailed inputs** → **Biophysical processes**  
Daily time-step – multiannual  
3D individual-based - multispecies

Colbach et al (2014) Eur J Agron, Colbach et al (2021) Field Crops Research, Gardarin et al (2012) Ecol Modelling, Mézière et al (2015) Ecological Indicators, Munier-Jolain et al (2013) Ecol Modelling, Pointurier et al (2021) Ecol Modelling

- Crop production
- Weed harmfulness
- Biodiversity

Indicator 1	Indicator 2	Indicator 3	...
0	0	1

10	0	1	
7	2	2	
8	8	3	

Biophysical processes  
Daily time-step – multiannual  
3D individual-based - multispecies

Understand

Compare

Detailed inputs → 3D individual-based - multispecies → Daily 3D outputs → Indicators

Colbach et al (2014) Eur J Agron, Colbach et al (2021) Field Crops Research, Gardarin et al (2012) Ecol Modelling, Mézière et al (2015) Ecological Indicators, Munier-Jolain et al (2013) Ecol Modelling, Pointurier et al (2021) Ecol Modelling

- Climate change → Quantify competition of weed and crop species for water
  - Which morphological traits are affected by water stress?
  - Does the effect depend on plant species?

A high throughput phenotyping platform

7 water regimes

7 contrasting crop & weed species

Key morphological traits from FLORSYS model

- 2 crops – 5 weeds
- 3 monocots – 4 dicots
- 1 summer – 5 winter annuals

- Wheat
- Oilseed rape
- Abutilon theophrasti*
- Alopecurus myosuroides*
- Avena fatua*
- Geranium dissectum*
- Tripleurospermum inodorum*

Souche-Suchovsky (2021) M2 thesis, Moreau et al (in revision) Weed Res

- Climate change → Quantify competition of weed and crop species for water
  - Which morphological traits are affected by water stress?
  - Does the effect depend on plant species?

7 water regimes

Key morphological traits from FLORSYS model

Next step = introduce into FLORSYS model

No systematic ≠

- Weeds vs crops
- Mono vs dicots
- Sampling dates

Souche-Suchovsky (2021) M2 thesis, Moreau et al (in revision) Weed Res

- Crop "topping" → limit weed seed return to soil seed bank ("protect" future crops)

*Alopecurus myosuroides*

Crops:

- Winter wheat (N=9)
- Spring barley / spring pea (N=2)

Number of seeds  
Viability/germinability

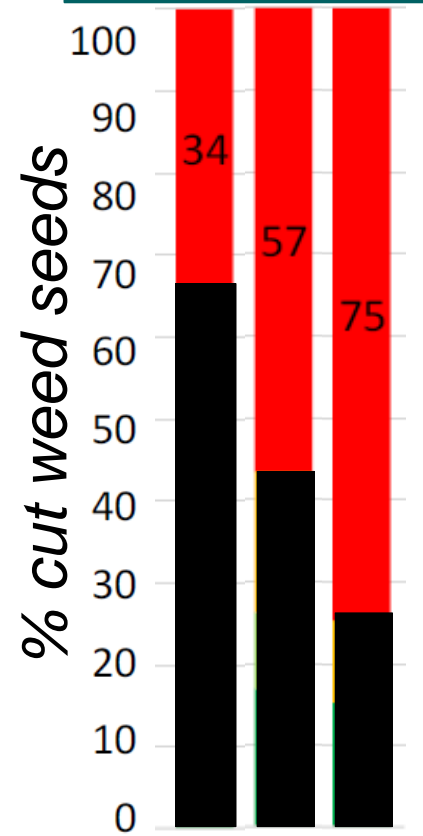

- Crop "topping" → limit weed seed return to soil seed bank ("protect" future crops)

*Alopecurus myosuroides*

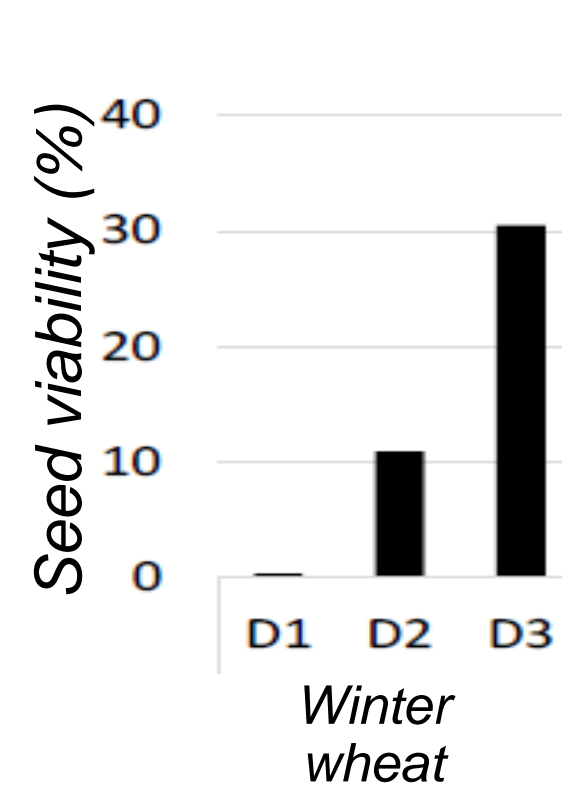

"Toppable" amount can ↑ with time

D1 D2 D3  
Northern France

BUT Viability ↑ with time

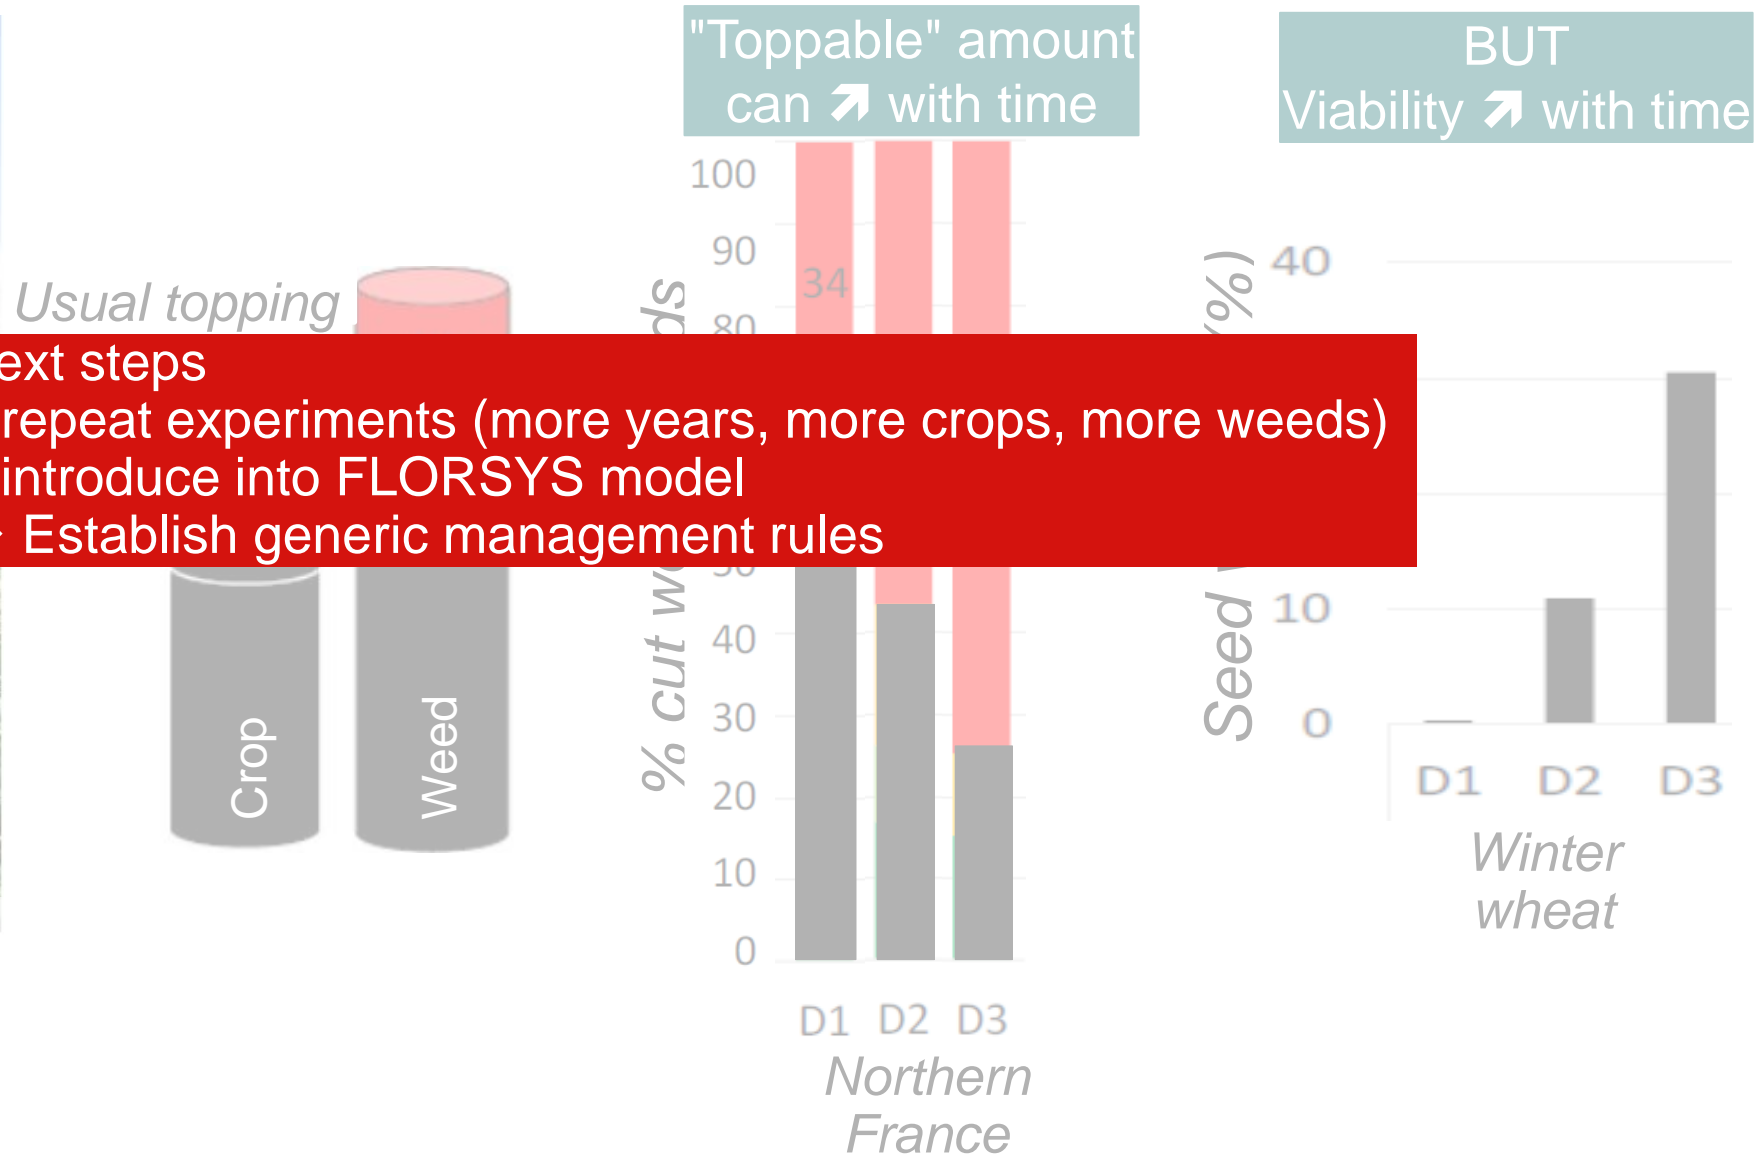

- Crop "topping" → limit weed seed return to soil seed bank ("protect" future crops)

*Alopecurus myosuroides*

**Next steps**  
 = repeat experiments (more years, more crops, more weeds)  
 = introduce into FLORSYS model  
 → Establish generic management rules

- Use FLORSYS to run virtual experiments and answer contrasting questions

**Optimize techniques for weed management → decision rules**

Crop sowing dates

Queyrel et al submitted Agric Sys

## Conclusion

A generic model to synthesize and transfer knowledge to stakeholders

- › Essential to juggle with the many techniques, objectives, conditions
  - determine flexible rules adapted to local conditions
- › All models are false but some are useful
  - continuously check model outputs and conclusions vs field observations

Ensure that research results are applicable in fields

- › Implicate stakeholders in research
  - participatory science
- › Go beyond multicriteria weed evaluation
  - multicriteria cropping-system evaluation of all aspects of sustainability
  - need and connect several evaluation tools
- › Train future farmers, advisors (and not only scientists)

**ReMIX**  
Species mixtures for redesigning  
European cropping systems
